## Web Hosting

Hosting is where your website is kept. We don't keep your website on our office computers, and you don't keep it on yours, if we did it that way, every time we turned our computers off, or had a power failure etc., the website would go off. Instead we have dedicated web servers located in a data centre with the following facilities:

-

Back up generators

-

Continous security

-

Technical support on the premises

-

Multiple Internet Direct back bone connections

-

Storage and backup

-

Full Management and monitoring.

Our products include a range of pre-packaged Content Management System web sites.

- Hawkbit - a range of packages for small businesses, clubs and other organisations.
- Arrowhead - for primary schools.
- Family Tree - a specialist genealogy web site based on phpGedview .
- Keetogether - Your very own personal website with a KeepTogether family and friends package.

If however one of our pre-packaged sites doesn't fit your needs and you need something different we can:

- Create and host a CMS package tailored to your requirements.
- Design, create, host and maintain a site just for you - anything from one page to hundreds.
- Install and host a basic Joomla CMS site, with administrative access, where you can install your own extra features.

So we supply everything from a site where you can make any changes you like at anytime through to a site entirely managed and maintained by us to your requirements - and everything between. The choice is yours.

More info about our hosting setup

All of our websites are placed onto web servers of the highest standard, and are co-located in heart of London UK. Our chosen data centre has multiple direct back bone connections to the Internet. This means you get a fast responding web site.

We spent a lot of time and effort setting up these servers, knowing that they would be a critical part of our business. We then located them in a fully featured, carrier class data centre in the heart of London.

There they provide the ability to control and look after our servers on a 24 hours a day 365 days a year basis. They also have round the clock power back-up in case of power failure, and 24 hour security to safeguard the servers from corruption and to protect information held on them from theft.
