

Teasel

Network video camera system with recording.

A professional self-assessment development tool for teachers.

Record your lessons and then assess effectiveness.

A flexible system that allows multiple network video cameras to be installed in the class room. Each camera is small and unobtrusive and soon forgotten by the children. A central monitoring and recording computer, located remotely allows viewing and recording from any camera.

FEATURES

1. Any number of cameras
2. Can use your existing computer network - simple installation and no wiring necessary.*
3. Dedicated monitoring/recording computer workstation. We recommend dedicating a single computer to run our Teasel software, but you may use an existing computer if it meets our specification.
4. Create a video record of selected lessons and store on DVD disk for later assessment.

We use digital network cameras from Axis Communications for this application. Axis Communications has been making quite a habit of delivering the latest advances in network surveillance technology. Their cameras offer easy installation and are ideal for this application.

An Axis network camera can be described as a camera and computer combined in one intelligent unit. It captures and sends live video directly over an IP network such as a LAN, intranet or the Internet and enables users to view and/or manage the camera using a standard Web browser or application software on any local or remote computer on a network. It allows authorised viewers from different locations to simultaneously access images from the same network camera(s).

* - depending on the number of cameras required and the number and type of computers on your school network it may be advisable to create a separate network segment for these cameras. We will be pleased to check out your network and advise on any upgrades needed to use Teasel.

PRICING

We will tailor a system to meet your specific requirements. Minimum cost for a single camera system will be around Â£2000.

Each additional camera expected to add approximately Â£600 upwards.

Prices depend on exact facilities and features required. Contact us for a no-obligation assessment for your school.Â
